

## Instructions for Venetian blind bracket

The front white plastic of the bracket is spring loaded 'A'.

1. Hook the front of the blind head rail on 'A' for all brackets, the headrail will be at a slight angle.
2. Push the front face of the headrail firmly towards the wall, this will push 'A' in.
3. When you have pushed in with the headrail at an angle, swing the back of the headrail upwards until it stops and then release the pressure. This will cause 'A' to spring forward and hook the back of the headrail onto the hooks 'B'.
4. To take the blind down is the reverse actions.

\*Tip... Before hanging the blind, press 'A' a few times to loosen it up a bit.
